

Fever

EMERGENCY:
CALL **911** IF

- You have trouble breathing.
- You have chest pain.
- You have trouble urinating.
- You are confused.

When to seek professional help

- Your temperature is higher than 39°C (102°F) and is not going down in spite of taking medication.
- You have stomach pain or are vomiting.
- You have had a fever for more than 2 days with no improvement.
- There are spots, patches or redness that have appeared on your skin.
- You traveled to a country that, according to the Government of Canada, poses a health risk (voyage.gc.ca).

How to get help

- 24/7, dial **811**
- Call your pharmacist
- Call your CLSC
- Call your clinic to make an appointment
- If you do not have a doctor, dial **811** option 3
- Find an appointment on rvsq.gouv.qc.ca

This booklet is not intended to replace the advice of a medical professional, nor is it intended to be a substitute for medical care.

Having a fever is a sign that you are sick.
Your body raises its temperature to protect itself.
You have a fever if your temperature is higher
than 38°C or 100.4°F.

What to do at home

Rest: Help your body fight off the infection by resting.

Hydrate: Drink plenty of water or fluids such as herbal tea or broth.

Medication: Take medications such as acetaminophen (Tylenol®) or ibuprofen (Advil®). Follow the directions and ask your pharmacist for advice.

Temperature: Dress lightly. Avoid blankets that are too heavy or too warm. Keep the house at a comfortable temperature.

Bath: Take a warm bath to bring down the fever. Avoid cold showers and cold baths.

Follow-up: Take note of your symptoms and temperature. This information could be useful if you have to call 811 to speak with a nurse.
